

# GREETINGS FROM MARS!

## **High Sulfate Concentration on a Layered Mound in Juventae Chasma**

[uahirise.org/ESP\\_011899\\_1755](http://uahirise.org/ESP_011899_1755)

This easternmost portion of a light-toned layered mound in Juventae Chasma has a high concentration of sulfates as determined from CRISM spectra, which indicate the spot has a different kind of sulfate present than the rest of the mound.
