

GREETINGS FROM MARS!

Colorful Outcrops in Schiaparelli

uahirise.org/PSP_006754_1790

Acquisition date: 4 January 2008

Approximately 271 kilometers above the surface

This image shows several colorful outcrops of rock in Schiaparelli, a large impact crater near Mars' equator. The colors indicate different rock layers and wind-blown materials, and a varied and complex geologic history. This area is now being eroded, exposing several different types of material.
