## Hematite in Capri Chasma

[uahirise.org/ESP\\_023331\\_1670](http://uahirise.org/ESP_023331_1670)

This HiRISE image shows light-toned units beneath darker mantles. At the Opportunity landing site in Meridiani Planum, the same gray hematite is found in millimeter size globules that have weathered out of the sulfate outcrop and become concentrated along upper soils.
