## Lobate Flow Features in the Northwest Hellas Rim

[uahirise.org/ESP\\_024000\\_1425](http://uahirise.org/ESP_024000_1425)

Lobate features such as these are located in the mid-latitudes (30-60 degrees), indicative of viscous flow, are reminiscent of terrestrial glaciers and have long-been interpreted as evidence for subsurface ice.
