## Field of Transverse Aeolian Ridges in Proctor Crater

[uahirise.org/ESP\\_024449\\_1320](http://uahirise.org/ESP_024449_1320)

Transverse Aeolian Ridges (or TARs) are small aeolian bedforms that are distinct from typical dunes or ripples. TARs are found all over Mars, and are typically located near layered terrains, or near fields of large dark dunes as they are here in Proctor Crater in the Southern hemisphere.
