## Sand Dunes in the Spring

[uahirise.org/ESP\\_025416\\_2640](http://uahirise.org/ESP_025416_2640)

In the winter, Martian dunes north of 70 degrees latitude are covered by a seasonal layer of carbon dioxide ice (dry ice). In the spring as the ice sublimates (goes directly from solid to gas) numerous seasonal phenomena are observed.
