

A Large Crater in Meridiani Planum

This crater is located in Meridiani Planum, about 20-kilometers northwest of where the Opportunity rover landed in 2004 (and about 42-kilometers northwest of Endeavour Crater's rim, where the rover has been busy the past few years). Although it's in the opposite direction from where the rover went, this crater is still an interesting place. With a diameter of 4-kilometers, it's the largest crater in the region other than Endeavour Crater (22 kilometers).
