

An aerial photograph showing a boundary between bright, cracked ice on the left and dark, textured sand dunes on the right. The sand dunes have a distinct, repetitive pattern of ridges and troughs. The overall scene is illuminated by a low sun, creating long shadows and highlighting the textures of both the ice and the sand.

DARK SAND AT THE MARGIN

This image covers the boundary between north polar ice and nearby polar sand dunes. The color data clearly distinguishes between the bright ice, dark sand, and reddish dust.
