

The image shows a vast, textured landscape of sand dunes. The dunes are characterized by their sinuous, wavy crests and individual domes. The colors are enhanced, showing a range from deep blues and purples to lighter, almost white, sandy areas. The lighting creates strong shadows, emphasizing the three-dimensional nature of the dunes. The overall scene is a close-up view of the Martian surface, showing the intricate patterns formed by wind-blown sand.

## PILES OF SAND WITH DIFFERENT SIZES AND COLORS

*This enhanced color image shows a variety of wind-related features near the center of Gamboa Crater. Larger sand dunes form sinuous crests and individual domes. All of these different features can also indicate which way the wind was blowing when they formed.*
