

# Gullied Crater Walls in Terra Cimmeria

ESP\_o28651\_1370

HIGH RESOLUTION IMAGING  
SCIENCE EXPERIMENT  
UAHIRISE.ORG

THE UNIVERSITY  
OF ARIZONA

The walls are etched with gullies and associated features, and it is interesting how their form varies around the walls of the crater. On the northern wall there are relatively few gullies in the smooth wall, but they are long and straight. On the western (left) wall, the upper slopes are incised with gullies but the lower walls seem to be covered with lobes or fans of material that may have been transported down the gully.

*The HIRISE camera onboard the Mars Reconnaissance Orbiter is the most powerful one of its kind ever sent to another planet. Its high resolution allows us to see Mars like never before, and helps other missions choose a safe spot to land for future exploration. Thousands of images are available online at: [uahirise.org](http://uahirise.org).*
