

Spring in Inca City II

ESP_037811_0985

HIGH RESOLUTION IMAGING
SCIENCE EXPERIMENT
UAHIRISE.ORG

It is about two weeks later (see ESP_037626_0985) in Inca City and the season is officially spring. Numerous changes have occurred. Large blotches of dust cover the araneiforms. Dark spots on the ridge show places where the seasonal polar ice cap has ruptured, releasing gas and fine material from the surface below.
