

A Possible Landing Site for the 2020 Mission: Jezero Crater

ESP_039348_1985

It’s not only when trying to find a scientifically interesting place to land that the high-resolution images from HiRISE come in handy: it’s also to identify potential hazards within a landing ellipse. This is one of the trickier aspects of selecting landing sites on Mars: a place to do good science but also where the risks of landing are low.
