

# Sinuous Ridge Materials in Reuyl Crater

ESP\_039424\_1700

HIGH RESOLUTION IMAGING  
SCIENCE EXPERIMENT  
UAHIRISE.ORG

THE UNIVERSITY  
OF ARIZONA

There are some interesting erosional signs in this observation, which will make for a good comparison with other intracrater fans and fluvial sedimentary landforms. We can also see an inverted channel system, possibly ponded. At high resolution, we might be able to resolve fine-scale layering/bedding and/or large, transported clasts (boulders).
